

FERESPE Building a Renewable Future

FERESPE is always searching for providing **castings** for consistent **quality** and performance of **renewable** powerplants, as well as improving their energetic **efficiency**.

The International Energy Agency (IEA)'s "World Energy Outlook 2020", report that several countries have introduced targets to achieve net-zero emissions by 2050.

For that, total CO2 emissions would need to fall by around 45% from 2010 levels by 2030.

Power sector investment nearly triples from \$760 billion in 2019 to \$2200 billion in 2030, with more than one-third spent to expand, modernise and digitalise electricity networks.

We focus our investments in **future**, looking for the best practices and **technologies**, taking account the **sustainability** of our actions.
